FEATURE MENU

BACKLIT DISPLAY

PC OPERATOR CONSOLE

PC PHONE

Alphanumeric display

By providing visual feedback, the user-friendly display makes it easier to handle calls and perform other tasks. You can use the displays to view a variety of information or access the hybrid IP PBX system's many features. And you can also make calls by following the visual prompts shown on the display.

Extra Device Port (XDP) and Digital XDP

XDP allows you to add an analogue phone, cordless phone or other standard-line device to your system, without the cost of an additional line – so you can send a fax while talking to a customer. Or, by connecting a modem to the XDP, you can download data from your PC or access the Internet while talking. With version 1.1 software, the digital XDP allows you to increase the number of digital telephones without additional cards, so you can provide more multi-functional key phones to more of your staff to boost overall office productivity.

Computer Telephony Integration (CTI) enables telephone system and PC to act as one co-ordinated business tool. Those who use the PC and the telephone together can be more efficient and present a more professional image to callers. A PC Phone is available for KXT7633 and KXT7636 telephones allowing users to receive and make calls directly from their PC screen.

Similarly, busy operators will benefit from Panasonic's PC Operator Console giving them a view on their PC of activity happening on the telephone system. The screen can be organised to show which extensions are ringing, which are free, and which are on a call or diverted. The screen can also show which lines are ringing, busy or free. With all this information the operator can be fully informed when handling callers and provide a much better service.

PC Operator Console Features

- View extension, line and parked call status
- Incoming call queue display
- Drag and drop call transfer
- Sort by name, extension number or status
- Call recording to hard disk
- Graphical Interface access to KXTDA features and speed dial list

PC Phone

- Integrates with MicroSoft Outlook
- Call recording to hard disk
- Graphical Interface access to KXTDA features and speed dial list

Easy to use. Hard to choose

The KX-TDA system is available with a full range of digital proprietary handsets and a DSS console. If 24 keys are not enough, a simple 12-key add-on module provides the answer. Suitable for KX-T7636 and KX-T7633.

All proprietary handsets in the range (including DSS console, 12-key add-on module and USB port options) are available in black and white. DECT handsets are only available as shown.

KX-TCA255

Panasonic has a range of headsets to prevent discomfort and fatigue, for use with these handsets (except KX-T7665). And if you already have a Panasonic KX-T, KX-TA or KX-TD telephone system, the KX-TDA will work with your existing handsets - making it an even lower cost solution to upgrading your business communications system.
